PROJECTS

Fitness and Diet Tracker | [GitHub](#)

May 2026

HTML5, CSS3, JavaScript, Node.js, Express.js, MongoDB

- Developed the backend of a full-stack fitness and diet tracking application, building REST APIs with Node.js and Express.js to support meal logging, workout logging, and progress tracking.
- Engineered formula-based calculation logic to compute calories, protein, and fiber intake from user-logged meal data.
- Implemented user authentication (login/signup) and integrated MongoDB to persist user profiles, meal logs, and workout history.

Anand Education Center | [GitHub](#)

December 2024

React.js, Node.js, Express.js, MongoDB

- Designed and developed a full-stack website for an educational institute end-to-end, independently handling both frontend and backend development.
- Built a React.js frontend presenting comprehensive institute information — courses, faculty, and admissions details — backed by a Node.js/Express.js REST API server.
- Implemented an authenticated admin panel for secure management of website content, with MongoDB used to store and manage site data.

BMI Calculator

HTML5, CSS3, JavaScript

- Built a responsive BMI calculator with a clean, intuitive interface that computes Body Mass Index from user-input height and weight, with instant client-side calculation and BMI category classification.

TRAINING / INTERNSHIP

Summer Training and Internship — Lovely Professional University (LPU)

50 Days

Data Structures & Algorithms using C++

- Completed an intensive 50-day training program in Data Structures & Algorithms using C++, building a Bank Queue Management System with queue-based logic — strengthening backend logic-building and problem-solving skills applicable to full-stack development.
